

PICTURES

Comparison of macro shot and zoomed shot. The amount of details are just astonishing. This can be achieved even if you are not a professional photographer. Simple point and shoot will be able to capture shots like this.

This is a compilation shot taken during sunset. There were no tripod or other stabilizers used for this shot.

1. Auto Mode shot
2. 100x digital zoom shot. The boat is not visible on naked eyes
3. Panoramic shot

This shot was taken in a dark room where the colours on the iMac Box is impossible to be seen. After the shot in night mode, to our surprise, we could make out the richness of the image.

Ultra-wide shot during a rainy low light scene. Very impressive details. The picture speaks for itself.

All the images were not edited by any means. We tested the video quality of this device in our car review which is posted in our Instagram and YouTube channels.

Conclusion

We can conclude our review by answering the main question, who best fits this mobile device? From what we experienced, this device is not the smallest and lightest to not feel its presence in your pocket. This device is designed for power hungry users who demand performance while multitasking. From content creators who capture, edit and upload their content to serious mobile e-sports gamer who will broadcast while playing, this device is a mobile workstation to earn. The price is justified for serious business where the fun factor is the interest from your investment. **Definitely its a 'Bat Mobile' ~ stealthy, uncompromising and functional.**
